Dear editor:

Attached you will find our submission, “Does It Always Do That? Practical Automatic Lightweight Non-determinism and Flaky Test Detection and Debugging for Python Libraries.” This manuscript is original and not in submission elsewhere. Reviewers knowledgeable in delta debugging or random testing systems might be most appropriate for the core content, which concerns the testing mechanics as much as the concepts involved in nondeterminism.

Sincerely,  
Alex Groce (agroce@gmail.com)
